September 2023,

To whom it may concern: Hoang Huy Pham

I have been a lecturer at Post and Telecommunications Institute of Technology for more than 5 years now.

My principal topic in recent years has been Artificial Intelligence, Computer Graphics, both of which have far-reaching applications across various sectors, including medicine, education, and security.

Hoang Pham took "Introduction to Artificial Intelligence" in the second term of third year, and, as in so many of his subjects, he performed very well and secured a "Very good" degree, which is very challenging for an IT student. This places him in the top 7% of graduating students at the University, which is of course one of the elite G3 Technological Universities in Vietnam.

I have no doubt Hoang Pham is a suitable candidate for postgraduate study, and I recommend him to you without reservation. He was a pleasure to teach, a good critical and independent thinker, has excellent quantitative and qualitative skills, and I am confident he will be successful wherever he continues his studies.

Should you require further information, please contact me on **+84 0976 669 858** or **quynhdttt@ptit.edu.vn**.
